- USA Today
  - The average cost of a computer breach at large companies globally was \$3.79 million, a survey released Wednesday found. For U.S.-based companies, the average cost was much higher, \$6.5 million.
  - <http://www.usatoday.com/videos/news/2015/05/27/28002175/>
- Not a week goes by without at data breach
  - Last week was the IRS

- It is been around for over a decade but was missing lots of important eco-system functionality
  - Workload scheduler (PBSPro)
  - Database (now PostgreSQL)
  - Search engine (now Accumulo support)
  - Authentication
  - RDMA Communication
- But SELinux is only part of the solution
